

Documentation (en)

Mongo Management Studio is the best way to work with MongoDB on a simple manner. The slim and elegant graphical interface can effectively perform the typical MongoDB commands without having to use the Mongo shell command line. There are three different versions of Mongo Management Studio.

Community Edition

The Community edition offers basic functionality and is free to use. It is easily installed using the setup routine without the need of any further software dependencies.

Professional Edition

The Professional edition is aimed primarily at developers and offers additional functionality. It is easily installed via setup routine and requires no additional software dependencies, too.

Educational Edition

The Educational edition is the same as the Professional Edition, but it can only be used by students or schoolboys/schoolgirls.

Enterprise Edition

The Enterprise edition is intended for production use environments in which databases are not directly accessible via the Internet. It is a node.js web application that can be installed on a server without a graphical user interface. Access to the application is controlled by a rights system.

Feature	Community	Professional / Educational	Enterprise
Simple Queries			
MongoDB 2.4 / 2.6 / 3.0 compatible			
CRUD Operations			
Replica-Set Support			
UI Index Management			
Export/ Import			
MongoDB Authentication			
Cross-Platform			
Detailed Documentation			
GridFS Support	read only		
SSL Connections			
SSH Connections			
Autocomplete			
Save Queries			
Commercial Support			
MongoDB User Management			
Aggregation Framework Queries			
JSON Schema Validation			
Mobile Ready			
Application User Management
